SUMMARY

Computer Science undergraduate (B.Tech, AKTU, Class of 2027) with hands-on experience designing, developing, testing, and delivering back-end and front-end software components through freelance client projects. Familiar with Agile principles, RESTful API development, component-level design, and Git-based deployment workflows. Comfortable working collaboratively with stakeholders to translate requirements into functional, tested software solutions. Available immediately for a remote internship.

EDUCATION

Dr. A.P.J. Abdul Kalam Technical University (AKTU)

India

B.Tech in Computer Science & Engineering

Expected 2027

- Relevant Coursework: Data Structures, DBMS, Web Technologies, Operating Systems, Computer Networks

12th Standard (PCM) – Completed 2021 | 10th Standard – Completed 2019

EXPERIENCE

Freelance Full-Stack Developer – B2B Enterprise Application

Feb 2026 – May 2026

Remote / Freelance

- Designed and developed back-end components using Node.js and RESTful API architecture, iterating based on stakeholder requirements across development cycles
- Built and verified component-level API controllers and database interaction layers (MySQL), ensuring each module was tested and stable before integration
- Debugged functional issues in the backend during development – traced root causes, implemented targeted fixes, and validated them with unit-level checks
- Delivered front-end components in React Native with consistent architecture, integrating them with tested back-end APIs for a production-ready release

Freelance Website Developer – Anjali's Salon (anjalis-salon.vercel.app)

Sep 2025 – Oct 2025

Remote / Freelance

- Gathered and refined requirements iteratively with the client, delivering responsive React.js and JavaScript components in short feedback-driven cycles
- Debugged cross-browser rendering and performance issues, implementing targeted fixes that improved load speed and increased customer engagement by 20%

PROJECTS

Jeevansetu – AI Health App | *Flutter, Dart, Firebase, Gemini API* | GitHub

- Designed the full backend data architecture – database schema, async API flows, and state management – and tested data handling across the app before release
- Integrated the Gemini API as a back-end service component, defining structured input/output contracts and validating responses against expected behavior

DevX – Developer Toolkit | *React.js, Tailwind CSS* | Live Demo · GitHub

- Built a component library with reusable, well-documented modules; validated each component's interaction states before publishing
- Used Git with automated deployment via Vercel – committing, reviewing, and delivering updates through a continuous delivery pipeline

TECHNICAL SKILLS

Back-End: Node.js, REST API Development, MySQL, Database Schema Design, PHP, Firebase

Front-End: React.js, React Native, Next.js, HTML5, CSS3, JavaScript (ES6+), Tailwind CSS

Testing & Debugging: Unit Testing, Component Validation, API Response Verification, Cross-Browser Debugging

DevOps & CI/CD: Git, GitHub, Vercel, Netlify (continuous delivery pipelines)

Practices: Agile Principles, Iterative Development, Stakeholder Collaboration, Modular Architecture

CERTIFICATIONS

Marketing Certification – IBM

Web Development Certification – GUVI / HCL (HTML, CSS, JavaScript)

Development in Python – GUVI / HCL

Java with Collection Framework – Summer Training Program

In Progress: Node.js, MySQL, Software Testing with JavaScript (Internshala / GUVI)
